

Nextriials Prism 2.7 Fact Sheet

Nextriials' Prism Electronic Data Capture (EDC) solution integrates project management, data management, product safety management, site management and related services into one comprehensive, easy-to-use solution. Introduced in October 2003, Nextriials' Prism version 2.7 features a single, user-friendly interface with the most innovative features in the industry including: comprehensive lab data management system, enhanced data visualization, dynamic data quality management, interactive subject screening and randomization, integrated product safety tracking, adaptive study design, real-time project management status alerts, business intelligence functionality, flexible inventory management and sophisticated access control. Prism 2.7 features include:

Lab Data Management System

- Intuitive data entry interface for adding lab data results for any lab panel and test
- Lab Global Library for storing local and central lab data for use across projects
- Lab Units Auto Selector which stores lab units for all participating labs and auto selects appropriate units during data entry
- Comprehensive lab range support that assures consistency of data with normal ranges, flags out of range values, and links with data quality interface for automatic query generation.
- Automatic unit conversion to Systeme International (SI) units or any other compatible units

Customized Start Page Portal

- New flexibility in designing and customizing the 'Start Page' portal for a project

Reports Feature Improvements

- Added dynamic report graphing including support for multiple graph layouts
- Improved display of tabular data to support multiple layout options
- Introduced data caching to enhance speed of report generation

Improved Windows Management

- New navigational enhancements for managing groups or collections of related data
- Support for viewing combined audit trail information for groups or collections of data

Jump (Quick Navigator)

- Enhanced interface for navigating directly to subjects, events and CRFs

Monitored Data Status Enhancements

- Improved features for highlighting data that have been modified since source verification

Prism Engine Improvements

- Object caching
- More efficient database communication
- Improved performance logging for better support
- Better memory management
- Better client configuration
- More efficient xml parsing
