

## FOR IMMEDIATE RELEASE

### **Nextrials Continues Guest Teaching Tradition at San Jose State University**

*CEO Jim Rogers to lecture on eSource, interoperability and EHR trends*

**San Ramon, CA, April 18, 2016** – Jim Rogers, CEO and co-founder of [Nextrials, Inc.](#), a leader in clinical research software and services, is returning to San Jose State University today as a guest lecturer for a class focused on the importance of eSource, interoperability and EHR integration. This is the sixth year that a Rogers has presented to students in the college's Medical Product Development Management (MPDM) program, and over the years the lessons delivered typically cover relevant regulations, guidances and trends taking place in the eClinical space.

"These students bring a fresh perspective to medical research," Rogers said. "Helping them better understand the importance of achieving interoperability between clinical research data and healthcare data and the immense benefits that come with it will ultimately help both industries better serve patients in the future."

Nextrials has a deep history with SJSU. Previously, Rogers participated in a novel drug discovery project coordinated by SJSU involving the screening of marine organisms for potential new drugs. Also, Rogers will be supported during his appearance by Nextrials' product support manager James Warren, a 2008 graduate of SJSU's psychology program and a repeat visitor in the lecture series.
